

2nd Annual Bio-Active™ Gathering

Friday, 24th February 2012

Agriculture helping the planet breathe easier™

Mr Gary Lewis (President of NCQ) will present latest research correlating tractor emission composition (diesel and bio-fuel) to plant growth. The Bio-Active™ method harnesses tractor exhaust to promote increased soil biological activity stimulating plant growth. The captured exhaust is cooled and injected into the soil while sowing or cultivating. What's going on in the soil as a result of our injection of exhaust emissions? Hear Gary explain how the soil and the plants growing in it interact biochemically, and are enhanced by, exhaust emissions.

This is your opportunity to educate yourself and others with the Bio-Active™ Technology. Meet with N/C Quest members who are using the Bio-Active™ Method, see the results, hear the facts and receive the answers to your questions concerning your farming practices.

Adopt a lower input, lower risk management approach to cropping with more options that improves your farm health and your lifestyle.

Featuring:

- Montana State University Data Presentation
- Bio-Active™ Theory and Plant Physiology
- Bio-Active™ 2012 Condensers
- 2011 Summary of Australia
- N/C Quest Inc. 2012 Vision
- Questions and Answers
- Testimonials

Details

Location: Forbes RSL, Forbes, NSW
When: Friday, 24th February 2012
Time: 10:00 AM

RSVP: *by Thursday 23rd

Brad Modra - Director

Phone: 0427246805

Email: sales@bioactive.com.au

Calvin Lewis - Service and Sales
